Wednesday Challenge Form

Group Members: Elizabeth,

Problem Statement: Identify a viable ratio between two random objects given to our group by Dr. Neato. Learn how to use a scale and what makes a scale a scale.

Approach: We first held up the two and felt the Weight. We totally guessed and had no method Of finding the ratio a different way. I said it was 1:4 but in the end we said it was 1:5.

Solution: The team that won was the only team that Explained what they did so they won.

Lessons Learned: Do what the teacher tells you
