

Date:11/16/16

Wednesday Challenge Form

Group Members: Malik, Zack, Raul, and me

Problem Statement: We were asked to put adhesive on two tabs of aluminum. Use sheer force to separate them. Use an apparatix and milk gallons for sheer force.

Approach: We just glued the two tabs with super glue. We waited for it to dry and it worked perfectly. Suprisingly, everyone's worked which was something Mr Miller did not expect.

Solution: no one won because everyone's tab worked.

Lessons Learned: try new things when you hav
The chance
