

Date:

Wednesday Challenge Form

Group Members: John, Even, Jacob, Jason, and Rohin

Problem Statement We needed to cut a block with hand tools so that it is 2 inches.

Approach: At first we tried just cutting the wood With just a saw. It wasn't really accurate so we Looked at what the other teams were doing. We learned that we could use sand paper to Length of the block more accurate.

Solution: In the end we cut the block a little more than 2 inches so that we could sand the block to exactly 2 inches. We successfully made it pretty accurate by 0.008 inches

Lessons Learned: we learned that we should Always think more about the problem before Trying to make a solution
